

25610 - Biomechanics and movement analysis

Información del Plan Docente

Academic Year	2017/18
Faculty / School	127 - Facultad de Ciencias de la Salud
Degree	275 - Degree in Physiotherapy
ECTS	9.0
Year	2
Semester	Annual
Subject Type	Basic Education
Module	---

1.General information

1.1.Introduction

1.2.Recommendations to take this course

1.3.Context and importance of this course in the degree

1.4.Activities and key dates

2.Learning goals

2.1.Learning goals

2.2.Importance of learning goals

3.Aims of the course and competences

3.1.Aims of the course

3.2.Competences

4.Assessment (1st and 2nd call)

4.1.Assessment tasks (description of tasks, marking system and assessment criteria)

5.Methodology, learning tasks, syllabus and resources

5.1.Methodological overview

5.2.Learning tasks

5.3.Syllabus

SECTION 1: MECHANICS

25610 - Biomechanics and movement analysis

1. Theoretical exposition in large group

2. Troubleshooting seminars

CONTENTS

Topic 1.1 INTRODUCTION TO MECHANICS AND BIOMECHANICS. Static and dynamic. Kinetics and kinematics.

Topic 1.2.- FORCES. Representation of forces. Net force. Units of measurement. Composition and decomposition of forces. Torque. Application to human movement.

Topic 1.3.- MASS AND WEIGHT. Force of gravity. Concept of mass and weight. Center of gravity of the human body. Determination of center of gravity of the human body. Segmental centers of gravity.

Topic 1.4.- STATIC. Line of gravity. Support base. Balance. Calculation of muscle forces involved to maintain balance and joint reaction forces in a certain position. Stability of equilibrium: factors influencing this stability.

Topic 1.5.- DYNAMICS: Kinematics. Movement. Reference systems. Types of movement. Linear kinematics. Angular kinematics. Relationship between linear and angular motion. Application to the analysis of movement.

Topic 1.6.- DYNAMICS: Kinetics. Momentum. Impulse. Conservation of momentum. Transfers of angular momentum. Application to body motion. Forces that modify the movement. Reaction force. Friction. Fluid dynamics: floating, resistance, pressure. Application to the study of human motion.

Topic 1.7.- WORK, POWER, ENERGY. Work. Units of measurement. Positive and negative work. Energy: potential energy, kinetic energy. Law of conservation of energy. Power. Units of measurement. Application to the analysis of movement.

Topic 1.8.- SIMPLE MACHINES. a) Anatomical Levers. Modification of effort and resistance torque. Applications. b) Inclined plane. Applications. c) Pulleys. Types of pulleys. Anatomical pulleys. Applications.

SECTION 2: STRUCTURAL BIOMECHANICS

1. Theoretical exposition in large group

2. Practical application in small groups

CONTENTS

Topic 2.1.- MECHANICAL BEHAVIOR OF TISSUES. Types of loads. Stress-strain curves. Parts of the curve. Mechanical properties.

25610 - Biomechanics and movement analysis

Topic 2.2.- BIOMECHANICS OF MUSCULO SKELETAL SYSTEM I: Bone. Mechanical properties. Factors influencing the mechanical behavior of bone. Bone fractures.

Topic 2.3.- BIOMECHANICS OF MUSCULO SKELETAL SYSTEM II: Joints. Mechanical properties of articular cartilage. Joint lubrication. Mechanical properties of ligaments and tendons. Menisci. Mechanical properties and function of menisci. Elementary motion of the joint surfaces. Joint kinetic chains.

Topic 2.4.- BIOMECHANICS OF MUSCULO SKELETAL SYSTEM III: Biomechanical properties of skeletal muscle. Mechanical behavior of muscle. Functional classification of muscles according to their structure. Types of muscular work. Muscle chains.

Topic 2.5.- MUSCULAR STRENGTHENING. Methods of dynamic, isometric and isokinetic muscle strengthening. Muscular endurance. Resistance assessment and exercises to increase it.

Topic 2.6.- BIOMECHANICS OF MUSCULO SKELETAL SYSTEM IV: Mechanical behavior of the peripheral nervous system.

SECTION 3: JOINT BIOMECHANICS

1. Theoretical exposition in large group
2. Practical application in small groups

CONTENTS

Topic 3.1.- BIOMECHANICS OF THE UPPER EXTREMITY. Biomechanics of the shoulder joint complex: kinematics; kinetics. II) Biomechanics of the elbow joint: kinematics; kinetics. III) biomechanics of the wrist and hand: kinematics; kinetics.

Topic 3.2.- BIOMECHANICS OF THE LOWER EXTREMITY. Biomechanics of the hip joint: kinematics; kinetics. II) Biomechanics of the knee joint: kinematics; kinetics. III) Biomechanics of the ankle joint and foot: kinematics. Kinetics.

Topic 3.3 BIOMECHANICS OF THE TRUNK. Biomechanics of the spine. General. Biomechanics of the pelvic girdle. Thoracolumbar spine biomechanics: kinematics; kinetics. Chest: respiratory mechanics. Cervical spine biomechanics: kinematics; kinetics.

SECTION 4: ANALYSIS OF HUMAN MOVEMENT

1. Theoretical exposition in large group
2. Lab practices

25610 - Biomechanics and movement analysis

3. Research work

CONTENTS

Topic 4.1.- ANALYSIS OF HUMAN MOVEMENT. Biomechanical analysis of human movement; application and purpose. Methods to be used for the analysis of human movements: description of the movement, anatomical analysis, mechanical analysis, conclusions.

Topic 4.2.- MOTION HUMAN ANALYSIS TECHNIQUES. Kinematic analysis techniques: direct and indirect. Anthropometric variables. Techniques for kinetic analysis. Kinesiological electromyography.

Topic 4.3.- POSTURE BIOMECHANICAL ANALYSIS. Adaptations of the human body in the way to the upright position. General mechanisms for maintaining upright posture. Elements responsible for maintaining erect posture at each joint level involved therein. Principles of good posture.

Topic 4.4.- GAIT BIOMECHANICAL ANALYSIS. The gait cycle: phases and periods. Energy expenditure during walking. Gait kinematics. Gait kinetics. Muscle actions during walking. Plantar supports.

Topic 4.5.- NORMAL GAIT IN SPECIFIC SITUATIONS. Gait in the child: acquisition and characteristics. Gait in the elderly. Other factors that modify the normal gait: sex, type of footwear, type of terrain, slope.

5.4.Course planning and calendar

5.5.Bibliography and recommended resources
