Figura 2: Estadísticas de los análisis con Ar+2% iso, mostrando a) el número de eventos que han producido interacciones en el gas que se han analizado, b) el número de eventos resultantes y c) el número de eventos que han superado los cortes. En este último se indican en rojo aquellos en los que el número de cuentas es <10, siendo estos a los que se les ha aplicado la corrección estadística que se muestra entre paréntesis y que es el límite superior con un 95% de confianza. Se indican los errores estadísticos \sqrt{c} y los errores relativos para ilustrar que en general son muy altos ya que hemos obtenido estadísticas insuficientes.

Figura 4: Estadísticas de los análisis con Xe+1% iso, mostrando a) el número de eventos que han producido interacciones en el gas que se han analizado, b) el número de eventos resultantes y c) el número de eventos que han superado los cortes. En este último se indican en rojo aquellos en los que el número de cuentas es <10, siendo estos a los que se les ha aplicado la corrección estadística que se muestra entre paréntesis y que es el límite superior con un 95% de confianza. Se indican los errores estadísticos \sqrt{c} y los errores relativos para ilustrar que en general son muy altos ya que hemos obtenido estadísticas insuficientes.
