29721 - Fundamentals of electronics

Syllabus Information

Academic Year: 2019/20
Subject: 29721 - Fundamentals of electronics
Faculty / School: 110 - Escuela de Ingeniería y Arquitectura
Degree: 434 - Bachelor's Degree in Mechanical Engineering
　　　　330 - Complementos de formación Máster/Doctorado
ECTS: 6.0
Year: 3
Semester: Second semester
Subject Type: Compulsory
Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. It is based on participation and the active role of the student favors the development of communication and decision-making skills. A wide range of teaching and learning tasks are implemented, such as lectures, guided assignments, laboratory sessions, autonomous work, and tutorials.

Students are expected to participate actively in the class throughout the semester.

Further information regarding the course will be provided on the first day of class.

4.2.Learning tasks

The course includes 6 ECTS organized according to:

- Lectures (1.8 ECTS): 45 hours.

- Laboratory sessions (0.6 ECTS): 15 hours.

- Guided assignments (1.2 ECTS): 60 hours.

- Autonomous work (2.2 ECTS): 55 hours.

- Evaluation (0.2 ECTS): 5 hours.

- Tutorials

Lectures: the professor will explain the theoretical contents of the course and solve illustrative applied problems. These problems and exercises can be found in the problem set provided at the beginning of the semester. Lectures run for 3 weekly hours. Although it is not a mandatory activity, regular attendance is highly recommended.

Laboratory sessions: sessions will take place every 2 weeks (5 sessions in total) and the last 3.0 hours each. Students will work together in groups actively doing tasks such as practical demonstrations, measurements, calculations, and the use of graphical and analytical methods.

Guided assignments: students will complete assignments, problems and exercises related to concepts seen in laboratory sessions and lectures. They will be submitted at the beginning of every laboratory session to be discussed and analyzed. If assignments are submitted later, students will not be able to take the assessment test.

Autonomous work: students are expected to spend about 55 hours to study theory, solve problems, prepare lab sessions, and take exams.

Tutorials: the professor's office hours will be posted on the degree website to assist students with questions and doubts. It is beneficial for the student to come with clear and specific questions.

4.3.Syllabus

The course will address the following topics:

- 0. Introduction. The functions of electronics in mechanical engineering. Electronic systems.
- 1. Sensing and conditioning. Electronic sensors used in mechanical engineering. Operational amplifier: linear stages.
- 2. Digital electronics and microprocessor systems.
- 3. Power supplies and batteries. Diodes, and voltage regulators.
- 4. Electronic control of power systems. Bipolar transistors, MOS transistors, thyristors

Practical sessions

- Session 1 - Laboratory instrumentation. Electrical measurements. Simulation of electronic circuits.
- Session 2 - Sensing and amplification.
- Session 3 - Sensing, control and visualizations using a microprocessor system.
- Session 4 - Power supply and linear voltage regulation.
- Session 5 - Small project: control of a DC motor using a microprocessor-based system

4.4.Course planning and calendar

For further details concerning the timetable, classroom and further information regarding this course, please refer to the "Escuela de Ingeniería y Arquitectura " website (https://eina.unizar.es/)

4.5.Bibliography and recommended resources
