

30714 - Projects 2

Syllabus Information

Academic Year: 2020/21

Subject: 30714 - Projects 2

Faculty / School: 110 - Escuela de Ingeniería y Arquitectura

Degree: 470 - Bachelor's Degree in Architecture Studies

ECTS: 6.0

Year: 2

Semester: Second semester

Subject Type: Compulsory

Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as lectures, practice sessions, visits, projects and exams.

The knowledge that students are going to acquire on this course is, in general terms, a result of the personal experience and the critical reflection that can be accumulated on the issues raised in the workshop. The course is structured on practical exercises ?projects? accompanied by lectures following a progressive and logical sequence. The program includes only two projects. Generally speaking, the following methodological procedure shall be followed:

- First, the teacher presents the exercise describing the limits of the intervention, the program, and the basic objectives of the project. Drawings, photographs, texts and other references necessary for the performance of the project will be given to the students.
- Secondly, and whenever possible, students will travel to the site of intervention and continue the previous analysis of conditions, pre-existing conditions and requirements.

Corrections of the project will be performed individually on the workshop's desk or openly as a review. Every project will have intermediate submissions or supervisions.

4.2.Learning tasks

This course is organized as follows:

- The design of two projects with their corresponding individual and public reviews
- Lectures to introduce the theory and methodology of architectural design.

4.3.Syllabus

This course will address the following topics:

As discussed in the previous point, the learning tasks of the syllabus consist on two design projects developed during the autumn term, approximately in seven weeks each of them. Every week, classes are divided into a theory session and the corresponding reviews and corrections of the projects, in groups, in the workshop.

4.4.Course planning and calendar

The course corresponds to 6 ECTS credits which is about 60 hours. Each of the two projects will have about 14 sessions. Each block of 14 sessions starts with a lecture framing the objectives that the project aims to accomplish. Although the character of this course is eminently practical, the student must regularly work outside the on-site scheduled hours, to review and analyze both lectures and the weekly reviews. Students are strongly encouraged to work extensively in the classroom taking advantage as well of the comments and suggestions given by his/her peers.

Further information concerning the timetable, classroom, office hours, assessment dates and other details regarding this course will be provided on the first day of class or please refer to the College of Higher Engineering and Architecture (EINA) website (<https://eina.unizar.es/>) and Moodle.

4.5.Bibliography and recommended resources
