

**Información del Plan Docente**

Academic Year	2016/17
Academic center	110 - Escuela de Ingeniería y Arquitectura
Degree	435 - Bachelor's Degree in Chemical Engineering
ECTS	6.0
Course	3
Period	Second semester
Subject Type	Compulsory
Module	---

**1.Basic info****1.1.Recommendations to take this course****1.2.Activities and key dates for the course****2.Initiation****2.1.Learning outcomes that define the subject****2.2.Introduction****3.Context and competences****3.1.Goals****3.2.Context and meaning of the subject in the degree****3.3.Competences****3.4.Importance of learning outcomes****4.Evaluation****5.Activities and resources****5.1.General methodological presentation**

The learning process that has been designed for this subject is based on the following:

In each laboratory session, students will work in groups of two or three people. The students will know in advance the lab work to be performed and must have read its script before the session.

Once in the laboratory, students will conduct the experimental work assigned. They will discuss the results and write one or more reports covering the work done (results, calculations, graphical representations...), with a proper presentation.

Finally, students must make an individual written exam that aims to demonstrate the knowledge acquired on the subject.

## **5.2.Learning activities**

**The program offered to students includes the following activities:**

A 1 hour lecture in the classroom or laboratory, where the teacher explains to all groups the theoretical concepts corresponding to practice 9 of the Chemical Engineering Department (see paragraph 5.3).

Laboratory sessions : 21 practices distributed as follows: (I) Chemical Engineering Department (4 ECTS): 13 sessions of 3 hours, (II) Thermal Systems Department (1 ECTS): 4 sessions of 2.5 hours. (III) Fluid Mechanics Department (1 ECTS): 4 sessions of 2.5 hours.

## **5.3.Program**

**The sessions program can be grouped according to the area, as follows:**

I) Chemical Engineering Department (4 ECTS): 13 sessions of 3 hours. Some sessions may change depending on the availability or proper functioning of the required equipment

Session 1. Kinetics of a catalyzed homogeneous reaction

Session 2. Kinetics of a homogeneous reaction in a continuous reactor

Session 3. Kinetics of an enzymatic reaction

Session 4. Absorption with chemical reaction

Session 5. Determination of the equilibrium curve and differential distillation

Session 6. Ion exchange

Session 7. Continuous stirred-tank and plug flow reactors (CSTR and PFR)

Session 8. Leaching

Session 9. Fluidization. Determination of fixed bed porosity and calculation of minimum fluidization velocity

Session 10. Distillation with reflux

Session 11. Continuous stirred-tank battery

Session 12. Adsorption isotherm

Session 13. Permeation of gas through porous membranes

(II) Thermal Systems Department (1 ECTS): There will be 4 sessions of 2.5 hours each. Practices will be the following:

Session 1. Thermal efficiency of a boiler.

Session 2. Evaluation of the performance of an evaporative cooler

Session 3. Internal combustion engines

Session 4. Thermal turbomachinery

(III) Fluid Mechanics Department (1 ECTS): 4 sessions of 2.5 hours each will be held.

Session 1. Disassembling and selection of pumps

Session 2. Pump testing and cavitation

Session 3. Pressure losses in systems. Valve characterization.

Session 4. Fan testing

#### **5.4. Planning and scheduling**

##### **Sessions and presentations scheduling**

Laboratory sessions are given following the schedule established by the Centre before the beginning of the current academic year (available in <http://eina.unizar.es>). They will be planned according to the number of students and will be announced in advance. Every teacher will inform the students about individual tutorial schedule. In addition to the recommended bibliography, the set of scripts of the laboratory sessions will be available at the EINA copy service

### 5.5.Bibliography and recomended resources
