

30321 - Systems Architecture

Información del Plan Docente

Academic Year	2016/17
Academic center	110 - Escuela de Ingeniería y Arquitectura
Degree	438 - Bachelor's Degree in Telecommunications Technology and Services Engineering
ECTS	6.0
Course	3
Period	First semester
Subject Type	Compulsory
Module	---

1. Basic info

1.1. Recommendations to take this course

1.2. Activities and key dates for the course

2. Initiation

2.1. Learning outcomes that define the subject

2.2. Introduction

3. Context and competences

3.1. Goals

3.2. Context and meaning of the subject in the degree

3.3. Competences

3.4. Importance of learning outcomes

4. Evaluation

5. Activities and resources

5.1. General methodological presentation

Course Objectives

1. Understand the structure and function of an operating system through its main elements: files and processes.
2. Acquire the basic knowledge for using the services of an operating system from the point of view of an advanced

30321 - Systems Architecture

user.

3. Know the problems caused by concurrent access to data and resources as well as traditional methods of communication between processes.

The learning process designed for this course is based on:

The monitoring of the programmed learning activities

5.2.Learning activities

The program provided to the students to help them achieve the expected results includes the following activities:

• Assistance and achievement in class

• Solving problems in small groups

• Performing assisted laboratory practices

• Performing individual lab-work

• Independent learning and individual work using the material utilized in the classroom and laboratory in addition to a collection of problems and bibliography.

• Resolution of queries through customized tutoring or small group tutoring.

• Performing the corresponding evaluation tests

5.3.Program

The content given in class will be organized as follows:

• C Lenguaje

• We will spend three hours in its description

• A big part of the labs, exercises and exams will consist of developing small codes in C

30321 - Systems Architecture

● Introduction

❍ Structure and function of an operating system

❍ Clasification of operating systems

❍ Review of fundamental concepts

● Processes

❍ Processes managment

❍ UNIX: process related system calls

❍ Implementation of a command interpreter

❍ Threads: managment and system calls

● File system

❍ Files managment

❍ UNIX: File system related system calls

❍ Basic comunication between processes: pipes

● Memory

❍ Memory mangement

❍ UNIX: memory related system calls

● UNIX: user vision

❍ Four hours of lab (Lab 1 and 2)

Assisted laboratory practices on the content given in lectures:

30321 - Systems Architecture

● Lab 1 y 2: UNIX: user view

● Lab 3. Processes managment

● Lab 4. Signals

● Lab 5. Tools for program development (ar and make)

● Lab 6. File system managment

● Lab 7. Communication between processes

5.4.Planning and scheduling

Schedule of lectures and presentation of works:

It will be set for each group once the academic calendar of the University of Zaragoza and each center is approved.

5.5.Bibliography and recomended resources
