

25869 - Physics II

Información del Plan Docente

Academic Year	2016/17
Academic center	110 - Escuela de Ingeniería y Arquitectura
Degree	558 - Bachelor's Degree in Industrial Design and Product Development Engineering
ECTS	6.0
Course	1
Period	Second semester
Subject Type	Basic Education
Module	---

1.Basic info

1.1.Recommendations to take this course

1.2.Activities and key dates for the course

2.Initiation

2.1.Learning outcomes that define the subject

2.2.Introduction

3.Context and competences

3.1.Goals

3.2.Context and meaning of the subject in the degree

3.3.Competences

BASIC COMPETENCES

CB01. Students have demonstrated knowledge and understanding in a field of study that is part of the general secondary education curricular, and is typically at a level which, although it is supported by advanced textbooks, includes some aspects that involve knowledge of the forefront of their field of study.

CB02. Students can apply their knowledge to their work or vocation in a professional manner and have competences typically demonstrated through devising and defending arguments and solving problems within their field of study.

CB03. Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include an important reflection on social, scientific or ethical issues.

CB04. Students can communicate information, ideas, problems and solutions to both specialist and non-specialist

25869 - Physics II

audiences.

CB05. Students have developed those skills needed to undertake further studies with a high degree of autonomy.

GENERAL COMPETENCES

GC04. Ability to organize time effectively and coordinate activities to acquire new knowledge quickly and perform under pressure.

GC05. Capacity to collect, manage, analyze and synthesize information from various sources for the development of design projects and product development. Capacity to use this documentation to obtain conclusions aimed at solving problems and making decisions with initiative, creativity and critical thinking, in order to generate new product concepts, new ideas and solutions.

GC06. Ability to generate the necessary documentation for the proper transmission of ideas through graphics, reports and technical documents, models and prototypes, oral presentations in Spanish and other languages.

GC07. Ability to use and master techniques, skills, tools and techniques and communication and others specific of design engineering needed for design practice.

GC08. Ability to learn continuously, to develop autonomous learning strategies and to work in multidisciplinary groups with motivation and determination to achieve goals.

SPECIFIC COMPETENCES

SC02. Understanding and mastery of basic concepts of the general laws of mechanics, thermodynamics, fields and waves and electromagnetism and its application for solving problems of Engineering in Industrial Design and Product Development.

3.4.Importance of learning outcomes

4.Evaluation

5.Activities and resources

5.1.General methodological presentation

Subject's learning process to pass the subject is based on the following aspects:

1. Masterclasses where the lecturer will explain the main theoretical concepts as well as will illustrate the application of the theoretical material via exercises and practical cases. Active students' participation is intended in this activity. In parallel, the students should spend self-study time in order to take advantage of the masterclasses.
2. Laboratory sessions will be scheduled during the semester. Lab sessions' assessment will contribute to the single overall mark. Lab sessions' groups will consist of two or three members.

25869 - Physics II

3. Supervised projects where students will work in problem solving tasks or a practical question proposed by the professor and related with the concepts learned in the subject.
4. Self-study time, learning the subject as well as performing problem solving tasks. This activity is essential for the student's learning process as well as to have success to pass the subject.

5.2.Learning activities

The planned subject's learning activities are listed as follows:

Masterclasses T1 (43 hours) (classroom activity)

This activity is intended to present the basics of the discipline illustrated with practical examples in order to facilitate the understanding and assimilation of the concepts. Problem solving tasks and illustrative examples will take place in the practical sessions with the cooperation of students. Students will be encouraged to solve prior to the masterclasses some problems proposed by the professor. This activity will take place on-site in the classical classroom.

Laboratory sessions T3 (10 hours) (classroom activity)

Laboratory sessions' scripts will be available for the students in the ADD. Scripts consist of a theoretical introduction and the steps to perform during the lab activity. Reading the script prior to attend to the laboratory session is a must for the student. Writing a full report including the main result is recommended after completing the lab sessions.

Supervised projects T6 (8 hours) (non-classroom activity)

This task could be:

- 1) Writing of the lab sessions' reports.
- 2) The professor will propose topics for individual or team works about different subject's parts. Students will be tutored during these tasks.

Personal work T7 (84 hours) (non-classroom activity)

It is of importance for the student to devote constant efforts, during the semester, for personal study, problem-solving tasks and writing lab sessions' reports.

Assesment T8 (5 hours) (classroom activity)

The overall assessment is planned at the end of the semester, but the continuous assessment will be a learning tool for

25869 - Physics II

formative and summative assessment during the semester. In this way, students can check their learning during the progress of the course.

Tutoring

The professor's tutoring timetable will be available for the student to ask question about the subject.

5.3.Program

The syllabus for proposed to achieve the learning results is listed as follows:

ELECTROMAGNETISM

1. Electrostatic field.
2. Electrical current.
3. Static magnetic field.
4. Electromagnetic induction. Maxwell's equations.

WAVES

5. Waves in solids and fluids. Acoustics.
6. Electromagnetic waves.
7. Optics.

5.4.Planning and scheduling

Schedule for on-site sessions and reports' deadline.

Schedule for the masterclasses, problem-solving sessions and laboratory sessions will be planned by the university center and will be published in the center's website. The remainder activities will be planned depending on the amount of students and the schedule will be provided in advance.

5.5.Bibliography and recomended resources

[RECOMMENDED BIBLIOGRAPHY](#)

25869 - Physics II

Usually, the bibliography of the academic year is updated and it can be checked in the Library's website searching for the recommended bibliography at biblioteca.unizar.es.
