

Información del Plan Docente

Academic Year	2017/18
Faculty / School	110 - Escuela de Ingeniería y Arquitectura
Degree	435 - Bachelor's Degree in Chemical Engineering
ECTS	6.0
Year	3
Semester	Half-yearly
Subject Type	Compulsory
Module	---

1.General information**1.1.Introduction****1.2.Recommendations to take this course****1.3.Context and importance of this course in the degree****1.4.Activities and key dates****2.Learning goals****2.1.Learning goals****2.2.Importance of learning goals****3.Aims of the course and competences****3.1.Aims of the course****3.2.Competences****4.Assessment (1st and 2nd call)****4.1.Assessment tasks (description of tasks, marking system and assessment criteria)****5.Methodology, learning tasks, syllabus and resources****5.1.Methodological overview**

The in-person training process will be given in three main levels: theory classes, exercises classes and laboratory, with a growing level of participation by the student.

In the sessions with the complete group, It will be illustrated the theoretical concepts in a master class format. These concepts will be reinforced with exercise resolution and case studies. The practical sessions will be organized in smaller groups in order to work with dedicated software applications and equipment from the manufacturing laboratory.

This process shall be completed with the alumni's personal work for preparation readings, theory study and exercises completion.

5.2.Learning tasks

The program presented to the alumni in order to help him to achieve the expected results, comprises the following activities:

Theory Classes (28h), including the content illustration with presentations and examples. This will facilitate the definitions, concepts and theoretical basis learning process regarding the different manufacturing process and any other content of the subject. The scheduled learning activities are grouped considering the topics indicated in the program.

Practical classes (14 h), performance problems and cases involving students, coordinated at all times with the theoretical contents.

Practical sessions (18 h), programmed with the topics listed in the program.

5.3.Syllabus

Agenda of theoretical-practical lectures

1) In-person class (T1) (28 horas).

Contents block 1. Introduction (Lesson 0) (1 h).

- Definitions

- Process classification (DIN 858)

Contents block 2. Process and manufact. technologies (Lessons 1, 2, 3, 4 y 5) (14 h).

2.1. Primary shaping processes (4 h).

- Casting with non-permanent moulds, die casting, injection

- Powder metallurgy .

- Additive ma nufacturing

2.2. Material removal processes (4 h).

- M achining and cutting.

- Finishing machining processes

- Electrical discharge machining

2.3. Forming processes (3 h).

- Volumetric forming processes:

- Rolling

- Forging

- Extrusión

- Laminar forming processes:

- Cut

- Deep drawing

- Bending

2.4. Union process **and assembly (3 h).**

- Welding metallurgy

- Welding process

- Other union processes

Contents block 3. Manufacturing systems (Lesson 3) (3 h).

- Characterization and analysis .

- CNC programming .

- Tools.

Contents block 4. Metrology and Quality (Lessons 6, 7, 8, 9 y 10) (10 h).

4.1 Metrology (4 h).

- Inspection and industrial metrology .

- Measurement assessment .
- Systems and methods of measurement .
- Fits and tolerances

4.2 Quality (6 h).

- Basic concepts of quality .
- Quality planning .
- Quality in product design and process .
- Quality in manufacturing .

2) Problems and resolution practical cases (T2) (14 horas).

5.4.Course planning and calendar

In-person sessions and case studies calendar

The master classes, exercise resolution classes and the laboratory will be given according to the official schedule of the center (schedule available in the center's website)

The rest of the activities will be scheduled considering the number of alumni and it will be informed with enough time to the interested

Every teacher will inform about his private tutoring available hours

The exams and official dates will be fixed by the Management Team of the center.

Resources

Apart from the bibliography, it is recommended the following material:

- 1- Subject notes and presentations
- 2- Exercises notes and Laboratory Guidelines.

5.5.Bibliography and recommended resources

29924 - Manufacturing Technology

- BB** Ingeniería de la calidad / Raquel Acero ...
[et al.] . - 2^a ed. Zaragoza : Centro
Universitario de la Defensa, 2013
