

30170 - Environmental engineering

Información del Plan Docente

Academic Year	2017/18
Faculty / School	179 - Centro Universitario de la Defensa - Zaragoza
Degree	563 - Bachelor's Degree in Industrial Organisational Engineering
ECTS	4.5
Year	2
Semester	Second semester
Subject Type	Compulsory
Module	---

1.General information

1.1.Introduction

1.2.Recommendations to take this course

1.3.Context and importance of this course in the degree

1.4.Activities and key dates

2.Learning goals

2.1.Learning goals

2.2.Importance of learning goals

3.Aims of the course and competences

3.1.Aims of the course

3.2.Competences

4.Assessment (1st and 2nd call)

4.1.Assessment tasks (description of tasks, marking system and assessment criteria)

5.Methodology, learning tasks, syllabus and resources

5.1.Methodological overview

The learning process designed for this subject is based on the development of theoretical-practical activities focused on environment pollution. The particular contents described in the verified manuscript of the degree and the corresponded credits are patented in these activities. The aim of these activities is to provide student with the expected learning outcome and the habits which help them in their professional and personal life.

30170 - Environmental engineering

5.2. Learning tasks

The teaching methodology consist of next active learning activities: lectures, practical sessions, problem-based learning, seminars, exams and finals. These activities could be complemented with others like problem solving tasks, mini-project work and lab reports redaction and the personal study.

Through the Moodle platform the professoriate makes the activities program accessible for the students with its corresponded username and password in the web site <http://moodle.unizar.es>

5.3. Syllabus

Topic 1. Engineering concepts applied to the environment

1.1. Introduction to engineering calculations

1.2. Mass balances

1.3. Fluid flow concepts

1.4. Separation processes

Topic 2. Water pollution

2.1. Introduction

2.2. Pollulants and its characterization

2.3. Depuration treatments

Topic 3. Atmospheric pollution

3.1. The atmosphere

3.2. Air pollution

3.3. Atmospheric pollution control

Topic 4. Waste pollution

30170 - Environmental engineering

4.1. General concepts and properties of the waste

4.2. Waste treatments

Topic 5. Environmental Management System (EMS)

5.1. Introduction

5.2. EMS Planning: identification and quantification of aspects and impacts in the environmental

5.3. EMS Planning: Air pollutants and waste identification and classification

5.4. Conclusions

5.4. Course planning and calendar

Deadlines for the presentation of different reports or solved-problems carried out along the course will be shown on Moodle platform or during the lectures. More information about dates and schedules could be found in the Centro Universitario de la Defensa web site: <http://cud.unizar.es>.

During the course, audio-visual and paper-based materials will be used. These materials will be available early enough in the Moodle platform.

5.5. Bibliography and recommended resources
