

## 29903 - Graphic expression and computer aided design

### Información del Plan Docente

<b>Academic Year</b>	2018/19
<b>Subject</b>	29903 - Graphic expression and computer aided design
<b>Faculty / School</b>	110 - Escuela de Ingeniería y Arquitectura
<b>Degree</b>	435 - Bachelor's Degree in Chemical Engineering
<b>ECTS</b>	6.0
<b>Year</b>	1
<b>Semester</b>	Half-yearly
<b>Subject Type</b>	Basic Education

### Module

#### 1.General information

##### 1.1.Aims of the course

##### 1.2.Context and importance of this course in the degree

##### 1.3.Recommendations to take this course

#### 2.Learning goals

##### 2.1.Competences

##### 2.2.Learning goals

##### 2.3.Importance of learning goals

#### 3.Assessment (1st and 2nd call)

##### 3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

#### 4.Methodology, learning tasks, syllabus and resources

##### 4.1.Methodological overview

The learning process that is designed for this subject is based on....

The teaching process will be developed in four main levels: theory classes, exercise classes, laboratory and supervised practices what means an increasing level of student participation. In the theory classes the contents Standardization Industrial Drawing and Descriptive Geometry will be taught illustrated with numerous examples each topic. In the exercises classes the students will solve exercises, under the supervision of a teacher. The laboratory practices will be developed in small groups, where the student will handle the software for Computer Aided Design. The supervised practices will consist of individual or group home work of technical applications that the student will develop with the guidance and supervision of the teacher.

## 29903 - Graphic expression and computer aided design

### 4.2.Learning tasks

Graphic Expression and Computer Aided Design is a subject of 6 ECTS credits, equivalent to 150 total hours of work, corresponding to 60 hours (Theory classes, problems, laboratory of Computer Aided Design...) and 90 non-contact hours (resolution of tutored exercises, study...)

### 4.3.Syllabus

The main contents are summarized in the following points:

**Standardization and industrial drawing:** Introduction to Graphic for Engineers. Standardization and Computer Aided Design. Drawing instruments and drafting machines. Formats, scales, line types and lettering. Orthographic views. Representation of threads. Broken-out sections. Dimensioning.

**Descriptive Geometry:** Techniques of labering points, lines and planes. Intersections. Parallelism. Orthogonality. Auxiliary views. Rotations. True size of a plane. True-lenght diagram. Distances.

**Surfaces:** Contour apparent and representation of surfaces. Defining and types of surfaces. Sections and intersections of lines. Transformed and geodesic. Development of surfaces

**Computer aided design 2D:** Introduction and general operation of the program. Main screen. Comand input. Function keys. File management. Program environment. Drawing aids. Coordinate systems. Display commands. Drawing commands. Selecting entities. Reference entities. Editing commands. Working with layers. Text. Dimensioning. Blocks. Attribute listing.

### 4.4.Course planning and calendar

The theory classes, the problem classes and the practice sessions in the laboratory are given according to an established schedule by the center. This schedule is published before the starting date at the center's web page and at the notice boards.

Each profesor will inform about his tutorial classes schedule.

The rest of the activities will be planned according to the number of students and they will be published with enough time

### 4.5.Bibliography and recommended resources
