

27038 - Celestial Mechanics

Syllabus Information

Academic Year: 2019/20

Subject: 27038 - Celestial Mechanics

Faculty / School: 100 -

Degree: 453 - Degree in Mathematics

ECTS: 6.0

Year: 4

Semester: Second semester

Subject Type: Optional

Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as lectures, practice sessions and autonomous work and study.

4.2.Learning tasks

This course is organized as follows:

- **Lectures.** Theoretical contents will be explained by the teacher.
- **Practice sessions** with oral discussion of proposed problems whose solution the students should previously have handed in.
- **Autonomous work and study.** Problems proposed for personal work.

4.3.Syllabus

This course will address the following topics:

- **Topic 1.** Motion in a central force field.

- **Topic 2.** Analytical Dynamics: Lagrangian and Hamiltonian formulation.
- **Topic 3.** Orbital perturbations.

4.4.Course planning and calendar

Further information concerning the timetable, classroom, office hours, assessment dates and other details regarding this course will be provided on the first day of class or please refer to the Faculty of Sciences website and Moodle.

4.5.Bibliography and recommended resources
