

28733 - Extension of Surface Hydrology

Syllabus Information

Academic Year: 2019/20

Subject: 28733 - Extension of Surface Hydrology

Faculty / School: 175 -

Degree: 423 - Bachelor's Degree in Civil Engineering

ECTS: 6.0

Year: 4

Semester: First semester

Subject Type: Compulsory

Module: ---

1.General information

1.1.Aims of the course

The main objective of the subject is to ensure that students acquire the necessary knowledge to develop Hydrological Engineering studies related to surface water resources.

1.2.Context and importance of this course in the degree

The subject of "Surface Hydrology" is a course of the Civil Engineering Degree of the EUPLA (University of Zaragoza). It is a semestrial subject, of the third year and has 6 ECTS credits.

1.3.Recommendations to take this course

The subject of "Surface Hydrology Extension" has not mandatory prerequisites, although it is advisable to the students of the Degree in Civil Engineering have passed the subjects of "Hydraulic Engineering: Basics" and "Extensions of Hydraulic Engineering and Hydrology".

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The subject is based on a strong interaction between the professor and the student. This interaction is brought into being through a division of work and responsibilities between the students and the teacher. Nevertheless, it must be taken into account that, to a certain degree, students can set their learning pace based on their own needs and availability, following the guidelines set by the teacher.

The current subject is conceived as a stand-alone combination of contents, yet organized into three fundamental and complementary forms, which are: the theoretical concepts of each teaching unit, the solving of problems or resolution of questions and laboratory work, at the same time supported by other activities.

The organization of teaching will be carried out using the following steps:

- **Theory sessions:** Theoretical activities carried out mainly through exposition by the teacher, where the theoretical supports of the subject are displayed, highlighting the fundamental, structuring them in topics and or sections, interrelating them.
- **Practical sessions:** The teacher resolves practical problems or cases for demonstrative purposes. This type of teaching complements the theory shown in the lectures with practical aspects.
- **Laboratory Workshop:** The lecture group is divided up into various groups, according to the number of registered students, but never with more than 5 students, in order to make up smaller sized groups.

Individual Tutorials: Those carried out giving individual, personalized attention with a teacher from the department. Said tutorials may be in person or online.

4.2.Learning tasks

The programme offered to the student to help them achieve their target results is made up of the following activities.

Face-to-face generic activities:

- **Theory sessions:** The theoretical concepts of the subject are explained and illustrative examples are developed as support to the theory when necessary.
- **Practical sessions:** Problems and practical cases are carried out, complementary to the theoretical concepts studied.
- **Laboratory Workshop:** This work is tutored by a teacher, in groups of no more than 5 students.

Generic non-class activities:

- Study and understanding of the theory taught in the lectures.
- Understanding and assimilation of the problems and practical cases solved in the practical classes.
- Preparation of seminars, solutions to proposed problems, etc.
- Preparation of laboratory workshops, preparation of summaries and reports.
- Preparation of the written tests for continuous assessment and final examinations.

The subject has 6 ECTS credits, which represents 150 hours of student work in the subject during the trimester, in other words, 10 hours per week for 15 weeks of class.

A summary of a weekly timetable guide can be seen in the following table. These values are obtained from the subject file in the Accreditation Report of the degree, taking into account the level of experimentation considered for the said subject is moderate.

Activity	Weekly school hours
Lectures	3
Laboratory Workshop	1
Other Activities	6

Nevertheless the previous table can be shown into greater detail, taking into account the following overall distribution:

- 24 hours of lectures, with 50% theoretical demonstration and 50% solving type problems.
- 8 hours of laboratory workshop, in 1 or 2 hour sessions.
- 4 hours of written assessment tests, one hour per test.
- 24 hours of PPT presentations.
- 90 hours of personal study, divided up over the 15 weeks of the 2nd semester.

4.3.Syllabus

Theory

Topic 1: The Hydrologic Cycle

Topic 2: Precipitation

Topic 3: Hydrological losses

Topic 4: Rainfall-runoff transformation methods

Topic 5: Flow propagation

Excercises and laboratory work

Most of the issues mentioned in the previous section are related to excercises to be done during the face-to-face sessions. Moreover the resolution of a practice based on the HEC-HMS Software is required to be developed and presented at the end of the course.

4.4.Course planning and calendar

The dates of the two final exams will be published on the official EUPLA web page.

Other relevant dates will be communicated by the professor during the first session of the course and will be published on Moodle platform.

4.5.Bibliography and recommended resources
