

28952 - Utilities and process control

Syllabus Information

Academic Year: 2019/20

Subject: 28952 - Utilities and process control

Faculty / School: 201 - Escuela Politécnica Superior

Degree: 437 - Degree in Rural and Agri-Food Engineering
583 - Degree in Rural and Agri-Food Engineering

ECTS: 6.0

Year: 4

Semester: First semester

Subject Type: Optional

Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as:

THEORY LESSONS

The theoretical academic sessions will be used to allow students to learn through exposure professor concepts and methodologies of work needed to start developing your self-employment. These sessions will be conducted mostly with the support of computer presentations and projected; previously will be provided to the student.

PROBLEM-SOLVING SESSIONS:

The student will be given a series of problem sets that will solve or try to solve, then the interactive sessions will address the doubts and resolutions thereof.

WORKS:

In the classroom will be proposed during the course 3 or 4 works, which the students have to solve. subsequent to the delivery, they made the defence of the same.

LABORATORY PRACTICE:

The professor made an explanation of the theoretical framework necessary for understanding the theory of practice to develop.

Explanation of equipment and instruments

Students operate the equipment, take data order that they can develop the practice report.

The completion of the practices is obligatory.

4.2.Learning tasks

The achievement of a student's basic training is based on theoretical type classes (30 hours) and problems type classes (20 hours), but the active participation of students will be encouraged.

Group work/activities (20 hours) are required; they allow the acquisition of general and specific competence.

Individual tutoring will be conducted to clarify the particular problems of each student and mandatory tutoring to work with reduced groups specific topics.

Also, the practice program (10 hours) allows transposing theoretical knowledge to practical application and development of scientific and technical documents.

Tools will be used to support teaching and problem-solving.

The Virtual Campus of UniZar will also be used as support.

4.3.Syllabus

The course will address the following learning tasks:

Theory programme

- Topic 1: Introduction

Thematic block 1:

AUXILIARY EQUIPMENT IN THE FOOD PROCESSING INDUSTRY

- Topic 2: Use of steam in food processing industries. Steam distribution network.Steam boilers.
- Topic 3: Drive compressed air and gases. pneumatic equipment. Distribution networks of compressed air.
- Topic 4: Drive liquids. Equipment and distribution networks

Thematic block 2:

PROCESS CONTROL IN THE FOOD PROCESSING INDUSTRY

- Topic 5: Introduction to automatic control.
- Topic 6: The Process.
- Topic 7: Process characteristics
- Topic 8: Control actions.
- Topic 9: Tuning controllers.
- Topic 10: Industrial Instrumentation (I)
- Topic 11: Industrial Instrumentation (II)
- Topic 12: Characteristics of typical process control loops
- Topic 13: Advanced Control
- Topic 14: Programmable Logic Controller.
- Topic 15: Applications in the industry. typical control schemes.

Practical Programme

- Practical 1: Simulating a food processing process. Dynamic response to different inputs
- Practical 2: Searching for, consulting and handling information: Catalogues of boilers and burners.
- Practical 3: PLC Programming.
- Practical 4: Tuning a controller for a continuous process.
- Practical 5: Visit a food processing industry to discover its auxiliary installations ?in situ? and to control its processes.

4.4.Course planning and calendar

Study time and individual work

Assistance to the on-site sessions is mandatory in works/activities and laboratory practice.

The students must take up the subject (4-5 hours per week) to understand and carry out further issues and problems that arise in class.

Overall it is estimated that students must use a total of 90 hours of personal work to complete a total of 150 hours devoted to the subject.

Type of activity/ Week	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
<i>On-site activity</i>																			
Theory	4	3	1	1	2	2	1	3	1	3	1	2	1	3			2		
Problems		1	3	3		2	1	1	1	1	1	2		1					
lab practices					2		2		2		2		2						
Evaluation																			
<i>Off-site activity</i>																			
Autonomous work	4	4	4	3	3	3	3	3	3	2	2	3	2	4	4	4	4	6	5
Group work		2	1		2	2	2	2	2	2	2	1	3	1					
TOTAL	8	10	9	7	9	9	9	9	9	8	8	8	8	9	4	4	6	6	5
